EDUCATION

King's College London Sept. 2026 – Sept. 2027
MSc Cyber Security

University of Westminster Sept. 2024 – June. 2026
BSc Computer Science - Achieved 1st

University of Aberdeen Sept. 2021 – June. 2022
BSc Computer Science - Achieved 1st*, transferred to Westminster*

Watford Grammar School for Boys - Maths, Computer Science, Physics Sept. 2019 – June. 2021

EXPERIENCE

FiveRivers Technologies *Lahore, Pakistan*
AI Engineer Intern May. 2026 – Aug. 2026

- Built anomaly detection of time series data for RemixLab, a time series analytical platform.
- Built a tuned Isolation Forest alongside Prophet-based forecasting in PyTorch and scikit-learn, raising recall by 15% over baseline..
- Wrote 12 different test cases targeting different failure modes such as point spikes, level shifts and variance bursts.

Budget Plus Services Limited *London, UK*
Software Engineer Intern Sept. 2023 – Aug. 2024

- Developed an internal web application using HTML, CSS and JavaScript by collaborating with cross-functional teams, reducing data entry errors by 15% and improving maintenance tracking.
- Led the migration of a legacy customer database from an on-premises server to the cloud, gaining hands-on experience across the product lifecycle, resulting in a 40% reduction in system downtime.
- Collaborated with engineers to meet business requirements, gaining insights into software development processes, which led to a 30% improvement in project delivery timelines.

Bright Network *Remote, UK*
Technology Experience Participant June. 2023 – June. 2023

- Worked in a multidisciplinary team to design innovative solutions for SMEs, creating 3 tailored strategies that addressed key technical challenges.
- Evaluated the feasibility and scalability of the solutions based on 5 categories: Technical Innovation, Creativity, Execution, Design and Business Model.
- Participated in professional development sessions, gaining insights into the latest technologies and software engineering trends.

SKILLS

Programming Languages: Python, JavaScript, C, Java, SQL, HTML, CSS, NodeJS, ReactJS, Git

PROJECTS

Distributed Privacy-Preserving Computation Benchmark

- Benchmarked homomorphic encryption (BFV via Microsoft SEAL) against secure multi-party computation (MPyC) across a hybrid fog and cloud deployment, quantifying the latency and throughput cost of each scheme under realistic network conditions.
- Built the testbed on a Raspberry Pi cluster orchestrated with K3s and linked over a WireGuard mesh to an Azure VM cloud node, with FastAPI coordinating workload distribution and result collection.

Global Security Monitor

- Developed a Python-based interactive dashboard, to visualise and analyse real-time global cyber threat data from IB abuse reports.
- Designed and implemented a user-friendly, responsive interface with features for live data integration.

MCP Traffic Inspector

- Built a debugging reverse-proxy for the Model Context Protocol that intercepts tool calls over JSON-RPC and SSE, persists them to SQLite and streams them to a live WebSocket dashboard.
- Implemented automated detection for prompt injection, data exfiltration, schema violations, repeated failures and latency anomalies; validated end-to-end against a mock MCP server with full test coverage.

COURSES

CompTIA Security+ (SY0-701) - Scheduled 21 September 2026
Data Science Professional Certificate by IBM on Coursera
